

JAVASCRIPT KICKSTART JAM

for members

#Day-1

#OVERVIEW

#Day-1

1. JavaScript is a programming language
2. JavaScript is Interpreted
 - a. Each browser has its own JavaScript engine, which either interprets the code, or uses some sort of lazy compilation
 - V8: Chrome and Node.js
 - SpiderMonkey: Firefox
 - JavaScriptCore: Safari
 - Chakra: Microsoft Edge/IE
 - b. They each implement the ECMAScript standard, but may differ for anything not defined by the standard
3. JavaScript is ECMAScript(...,ES6, ES7)

#WWW

#Day-1

- Why?

To build -

- Web Applications
- Server Applications
- Games
- Mobile Apps

- When?

- Where?

#WWW

#Day-1

- Why?
- When?
 - Dynamic Content on Website
 - Client side functions
 - Animate your website
 - Attractive mobile applications
 - Native mobile applications
- Where?

#WWW

#Day-1

- Why?
- When?
- Where?
 - In web application
 - In mobile application
 - In desktop application
 - In ML application

#WHERE

#Day-1

1. In website -

- Inside <head>
- Inside <body>
- External

2. In mobile app -

- React Native

3. In desktop app -

- Electron JS

#SYNTAX

#Day-1

```
const firstName = "Aman"
const lastName = 'Singour'
var greet = "Good Morning"
const bio = [function() { console.log(greet) }, "I'm "+firstName+" "+lastName,
'Student', 20, true]

// This is comment
for (let i = 0; i < bio.length; i++) {

    if(typeof(bio[i]) === 'function')
        console.log(bio[i](), "|", typeof(bio[i]));
    else
        console.log(bio[i], "|", typeof(bio[i]));

}
```

#Day-1

#VLC(var, let, const)

1. var

- Change Value
- Change Type

2. let

- Change Value

3. const

- Nothing to do

#TYPES

#Day-1

1. Dynamic typing

2. Primitive types

- undefined
- null
- boolean
- number
- string

3. Objects

#PROJECT

#Day-1

- Make count down timer
 - a. Use Date() method
 - b. Try var, let, const for to store new date
 - c. Use JavaScript Dom to render html elements
 - d. Use css class to make your web app attractive
- Methods that you will use
 - document.getElementById()
 - document.createElement()
 - element.appendChild()
 - Date()
 - element.className
